### Technical Data

**Type:** Portable, electronic calculator.

**Keyboard:** 10-key system.

**Display system:** By LED (light emitting diode).

**Number of display digits:** 10. Zero suppress system (unnecessary zeros are not displayed).

**Register:** 3.

**Operational digit:** 10 digits for both first factor and calculating numeral. Priority maximum 10 top digits for calculation results.

**Decimal point system:** Complete floating.

**Negative numbers:** True value is indicated with floating negative sign.

**Types of calculations:**
- Addition, subtraction, multiplication, division, chain multiplication and division, constant multiplication and division, raising to a power, and mixed calculations.

**Other functions:**
1. Automatic clearing of calculations.
2. Automatic resetting of decimal point in multiplication and division after overflowing of calculation result.
3. Data is internally preserved by the automatic display of "H".
4. Interlocking of entry overflow and display of "E".
5. Display of "E" for calculation result overflow.

**Calculating components:** Two MOS-LSIs.

**Power source:**
1. NiCd battery pack (charged with exclusive charger). DC 4.8 V 1.4 W. Two and a half hours of continuous use is possible with one full charge.
2. Four penlight (size AA) dry batteries (using dry battery cassette). DC 6 V 2.3 W.
3. Household electricity (exclusive charger serves double purpose as adapter). AC 115V/220V/240V (-15+10%). 50/60 Hz, DC 5.3 V 4. Automobile power source (with use of exclusive car battery adapter). DC 12 V.

**Usable temperature:** 0°C-40°C (32°F-104°F).

**Size:** 80 mm wide × 146 mm deep × 35 mm high (3-1/8" wide × 5-3/4" deep × 1-3/8" high).

**Weight:** 425 grams (15 ozs) (with NiCd battery pack attached).

**Exclusive charger:** Necessary time for charging NiCd battery pack: 3 hours. Floating charge system whereby operation is possible during charging of battery. With power lamp and charge lamp. Size: 72 mm wide × 223 mm deep × 70 mm high (2-7/8" wide × 8-3/4" deep × 2-3/4" high). Weight: 600 grams (1 lb 5-1/8 ozs).

Subject to alterations.

**English Edition**
Operational Keys
- Clear Key: For clearing all entries and calculations.
- Clear Indicator Key: For correcting entries and double entries.
- Instruction Keys: Press according to calculation expression.
- Numeral Keys: For entering numerals.
- Decimal Point Key: Press at the decimal point position of the numeral to be entered. In the case of fractional numerals only, it is not necessary to press the key before the decimal point. Example: 0.123 Operation: 123

Before Operation
1. Slide forward the power switch which is situated on the left side of the Palmtronic.
2. Confirm the position of the battery checker. If the needle is pointing to the blue section, it means there is sufficient voltage. If the needle points to the red section, recharge the battery or replace it with a new one. Correct results cannot be obtained with the Palmtronic if it is operated when the needle is pointing to the red section.
3. Press the key. The "H" in the display window will change to "0" and operation can be started.
How to Operate
1. The keys are operated according to the calculation expression.
2. It is not necessary to press the key every time before starting the next calculation because the preceding calculation result is automatically cleared.
3. The first operation in constant calculation is performed according to the calculation expression. From the second operation, each product or quotient is obtained by just entering the multiplier or dividend and pressing the key. In the case of constant multiplication, the first entry (multiplicand) is the constant, and in the case of constant division, the second entry (divisor) is the constant.
4. Press the key when incorrect entries or double entries are made, make new entries, and continue the operation.
5. When any of the instruction keys are pressed by mistake, just repress the correct instruction key and the operation can be continued.
6. Calculations containing negative signs are possible only in the following cases. Always press the key before starting calculations.
   \[ -a \div b \] = Operation: \[ -a \div b \]
   \[ -a + b \] = Operation: \[ -a + b \]
7. When an entry for the 11th digit is made, "E" is indicated on the very left side of the display window and entries above that cannot be made.
8. When the integral number part of the result exceeds 10 digits, an "E" is indicated on the left side in the display window and, at the same time, only the top 10 digits are indicated. In this case, the decimal point cannot be seen. However, it is stored inside. Therefore, this result can be used as it is in the next multiplication or division.
9. The displayed numerals disappear after awhile and "H" is displayed. Press the key to recall a numeral.

After Completion of Calculation
Set the power switch at OFF.

How to Use the NiCd Battery Pack
1. Align the contact side of the battery pack with the contact side of the battery loading section, located on the rear section of the Palmtronic, and insert.
2. When removing, pull it out while pushing the latch of the battery pack.
   - When removing the battery pack, be careful that the contact section does not come into contact with any metallic parts.

How to Use the Exclusive Charger
1. Set the Palmtronic, attached with the battery pack, on top of the charger, slide it
along the guide rail and connect it to the insertion slot of the charger. At this time, keep the power switch of the Palmtronic set at OFF.

2. Insert the tightening screw located on the bottom side of the charger, into the screw socket of the Palmtronic and turn it clockwise until it stops. Make sure it is securely fixed.

3. Insert the plug of the cord into an AC power socket. The power indicator lamp (red) and the charge lamp (yellow) will light up to indicate that charging has started.

4. When charging nears completion, the charge lamp will start to flash on and off. It will go off when charging is completed.

5. When detaching the Palmtronic from the charger, loosen the screw on the bottom side of the charger and pull out the Palmtronic along the guide rail, being careful not to damage the insertion slot.

How to Use a Dry Battery Cassette

1. Load a dry battery cassette with four new penlight (size AA) dry batteries. When loading the batteries, first lay the black tape, which comes attached with the cassette, on the bottom and then load the batteries from the minus (−) side according to the diagram inside. The Palmtronic will not function if the direction of the batteries are incorrect.

2. Load the dry battery cassette into the battery chamber of the Palmtronic.

3. When changing the dry batteries, take them out while holding the latch of the cassette. Change all four batteries at the same time. The dry batteries can be easily taken out by pulling the black tape of the cassette.
