INTRODUCTION

Congratulations on your purchase of this electronic alarm clock-calculator. This is a revolutionary new product designed to serve the following three purposes, a clock with four alarms, a stopwatch and a calculator. Please read this manual carefully and thoroughly so that a longer machine life can be ensured.

1 NOMENCLATURE

(1) READ-OUT
Shows the date, day, hours, minutes and AM/PM in the clock mode, the time measured in the stopwatch mode and all figures including entries and answers in the calculator mode.

(2) MODE SELECTOR
Allows the use of the unit in the three different modes of clock, stopwatch and calculator. It is also used to switch on and off the display and to set the clock and alarm.

(3) ELECTRONIC BUZZER
Sounds at a preset time with a high-frequency electronic tone.
(4) **AC ADAPTOR SOCKET (JACK)**  
Used when connecting this unit to the AC outlet.

(5) **KEYBOARD**  
Used to set the time, date and alarm time and also to perform calculations. It has numeral keys, 0 ~ 9, and command keys, and and.

(6) **TIME KEY**  
Allows the clock to be started with a time signal.  
When the clock is powered by battery, the key is used to display the time.  
In the stopwatch mode, it also serves as a start/stop key.

(7) **LAP KEY**  
Used to check the lap times of a race, etc. in the stopwatch mode.

(8) **ALARM KEY**  
Used to set the alarm or stop the electronic buzzer.

**MODE SELECTION**

The mode selector allows the setting of the unit to a desired mode so it can perform different functions:  
• With the mode selector in ST, the unit can serve as a stopwatch.  
• When the unit is not in use, place the mode selector in OFF. In this case, the time display disappears but the clock keeps timing.

- Setting the mode selector in TIME permits use of the unit as a clock.  
  When the unit is battery-powered, the time can be displayed by depressing the key, and the time display continues only while the key is kept depressed.  
  When the unit is connected to the AC adaptor, it gives constant time display.  
- When the mode selector is set in COMP, the unit can be used as a calculator.  
- When the mode selector is placed in SET, the setting of the date, time and alarm time is possible.

Since the clock is operated by two silver oxide batteries (G-13), it continues timing regardless of the mode selector position.

* EACH TIME THE MODE SELECTOR IS OPERATED, BE SURE TO DEPRESS THE KEY.

**IMPORTANT NOTES**

- Since the unit contains precision electronic components, never attempt to disassemble it.  
  Be careful not to drop or give the unit a hard shock. Avoid operating the keys roughly.
- Avoid using the unit in an extremely dusty, hot or humid place. Never expose it to direct heat from a heater or to the direct sunshine for long periods, for instance, inside a car or on a terrace.
- To clean the exterior of the unit, use a dry, soft cloth or a cloth moistened with a neutral detergent. (The cloth should be squeezed hard after being dipped in the detergent.) Avoid using a lacquer thinner, benzine or alcohol.
POWER SOURCE

The unit is operated by two different types of batteries for the clock and display.

For clock... Two silver oxide batteries (G-13) (The batteries supply power for alarm, stopwatch and calculator functions.)

For display... One AA-size dry battery (UM-3, SUM-3 or AM-3), or AC power
(The AA-size battery supplies power for display of time, calendar, entry, calculation result, etc.)

LOADING BATTERIES
1. Lightly press the portion marked OPEN on the battery box cover on the back of the unit with your finger, and push it in the direction of the arrow. Now the cover can be opened.

2. When it is opened, another small cover can be seen inside. It can be opened in a similar manner.

3. Put two silver oxide batteries (for the clock) into the smaller box, and replace the cover.

4. Put the AA-size dry battery (for display) into the larger box and replace the cover.

* Take care not to reverse battery polarity.

BATTERY LIFE AND REPLACEMENT INTERVALS

- The two silver oxide batteries (for the clock) continue to operate for about one year.

- The AA-size dry battery (SUM-3 for display) operates continuously for about 5 hours.

- When the battery voltage for display drops, the display begins to flash or grows dim.

- When the battery voltage for the clock drops, all functions will be stopped.

- If any sign of voltage drop is noticed, replace the batteries immediately.

OPERATION WITH AC POWER

AC connection automatically cuts off the battery, and the power source switches to AC power. (In this case, the battery for display may be removed.) If the AC adaptor is used for a prolonged period, it will become slightly hot, but no adverse effect will be given to machine life or performance.

* When connecting to the AC adaptor, be sure to place the mode selector in OFF.
CAUTION
- If the unit is not used for a long period, it is advisable to remove the AA-size battery. Otherwise, the battery may leak, thus damaging component parts.
- Do not remove the silver oxide batteries unless it is exhausted.
- Don’t leave a dead battery in the battery box.
- If the electronic buzzer does not stop sounding or the stopwatch does not operate normally when new silver oxide batteries are loaded, then remove the batteries and put them back in after waiting one minute or so.

USAGE
PLEASE STICK THE LABEL ENCLOSED TO THE BACK OF THE UNIT FOR YOUR REFERENCE.

DIGITAL CLOCK
- Set the mode selector to TIME.
- Put two silver oxide batteries (G-13) for the clock into the battery box. The clock continues to operate for about one year.
- If the clock is set correctly, it will keep good time without being affected by any other operation (e.g., display battery replacement).

READ-OUT:

<table>
<thead>
<tr>
<th>Day</th>
<th>Hour</th>
<th>Minute</th>
</tr>
</thead>
<tbody>
<tr>
<td>2.5 . 1.0 . 5.8.</td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

AM/PM
(Dot indicates PM)

Day of the week
(Day is indicated by the flashing dot)

(Use) 25th (Sat.) 10:58 PM is on display

1. Setting the time
As this clock maintains accuracy within ±15 seconds per month (under normal temperatures), it is advisable to lock the time display in anticipation of a time signal about one or two minutes ahead and wait. On hearing the time signal, depress the key, and the clock will start. Since the calendar is permanently programmed, no date adjustment is required each month or in a leap year, but the entry of the year and month is necessary for setting of the time.

Example: Setting to 10:58 PM (Sat., June 25, 1977)
- Place the mode selector in SET.
### Key Operation vs. Read-Out

<table>
<thead>
<tr>
<th>Key Operation</th>
<th>Read-Out</th>
</tr>
</thead>
<tbody>
<tr>
<td>(Entry of year)</td>
<td>77 7 8 9</td>
</tr>
<tr>
<td>(Entry of month)</td>
<td>7 7 6</td>
</tr>
<tr>
<td>(Entry of date)</td>
<td>7 7 . 0 6 . . . 2 5</td>
</tr>
<tr>
<td>(Entry of hours)</td>
<td>2 5 . 1 0 . . . 8</td>
</tr>
<tr>
<td>(Entry of minutes)</td>
<td>2 5 . 1 0 . . . 8</td>
</tr>
<tr>
<td>(PM sign)</td>
<td>2 5 . 1 0 . . . 8</td>
</tr>
</tbody>
</table>

With this operation, you are ready for time setting. Now just depress the [8] key with the time signal.

**Time signal of 58 min.**

**2. Adjusting the time**

Once the time is set, the clock keeps good time, except when the batteries (G-13) are exhausted. If adjustment is necessary, follow the above key operation.

#### How to Use Alarm

The alarm can be set in four alarm time positions (1, 2, 3 and 4) and at intervals of one minute or more. The command of AM and PM for each setting is possible. The electronic buzzer continues sounding for one minute at each preset alarm time.

1. **Setting the alarm**

* Place the mode selector in SET.

**Example:** Setting Alarm 1 to 6:30 PM

<table>
<thead>
<tr>
<th>Key Operation</th>
<th>Read-Out</th>
</tr>
</thead>
<tbody>
<tr>
<td>(Entry of hours)</td>
<td>6 3 0</td>
</tr>
<tr>
<td>(Entry of minutes)</td>
<td>6 3 0</td>
</tr>
<tr>
<td>(Entry of PM)</td>
<td>6 3 0</td>
</tr>
<tr>
<td>(Entry of alarm No.)</td>
<td>1 6 3 0</td>
</tr>
</tbody>
</table>

* To correct a wrong numerical entry or command, depress the [8] key and start the above key operation all over again. When an operation error is made, an "E" sign appears, locking the unit. To release, repeat the same procedure.

* After setting the time, place the mode selector in a desired position. At any mode position, the clock keeps timing.
Next, set Alarm 2 to 9:00 AM and Alarm 3 to 3:05 PM. Alarm 4 is not used. Proceed as follows:

<table>
<thead>
<tr>
<th>OPERATION</th>
<th>READ-OUT</th>
</tr>
</thead>
<tbody>
<tr>
<td>2</td>
<td>9-00</td>
</tr>
<tr>
<td>3</td>
<td>3-05</td>
</tr>
<tr>
<td>4</td>
<td>0-00</td>
</tr>
</tbody>
</table>

With this key operation, the setting of the alarm is complete, and the alarm will sound at a preset time.
* The electronic buzzer gives out different tones for each alarm.

- Alarm 1
- Alarm 2
- Alarm 3
- Alarm 4

- After setting the alarm, place the mode selector in a position other than SET.
- The alarm Nos can be set in any order.
- If an error is made in key operation, depress the 4 key and start the operation all over again.
- The clock will not be affected by alarm time setting.
- When powered bybattery, the alarm time can be checked by placing the mode selector in either TIME or OFF.
When the buzzer stops sounding, the display of alarm time disappears.

2. **Checking the alarm time**
To check the alarm time, set the mode selector to COMP and proceed as follows:

<table>
<thead>
<tr>
<th>KEY OPERATION</th>
<th>READ-OUT</th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td>6-30</td>
</tr>
<tr>
<td>2</td>
<td>9-00</td>
</tr>
<tr>
<td>3</td>
<td>3-05</td>
</tr>
<tr>
<td>4</td>
<td>0-00</td>
</tr>
</tbody>
</table>

3. **Changing or clearing the alarm time setting (Mode selector at SET)**
Change ........ The alarm time can be changed by simply setting a new alarm time.
Clear .......... Depress the 4 key, 4 key, and numeral key (1, 2, 3 or 4), in that order.
Example: Clearing Alarm 2.

<table>
<thead>
<tr>
<th>OPERATION</th>
<th>READ-OUT</th>
</tr>
</thead>
<tbody>
<tr>
<td>2</td>
<td>0-00</td>
</tr>
</tbody>
</table>

4. **Stopping the buzzer**
The electronic buzzer sounds at a preset time for one minute, regardless of the mode selector position.
To stop the buzzer, depress the key.
* If the mode selector is in OFF, the buzzer cannot be stopped by depression of the key. To stop the buzzer, change the mode selector position and depress key.

**STOPWATCH**
* Set the mode selector to ST.
* The stopwatch can measure time up to 9 hours 59 minutes 59 seconds and 9/10ths of a second. The moment that the time accumulated reaches 10 hours, the stopwatch reverts to "0" and restarts timing.

Read-out

9 - 5 - 9

Hour  Min  Sec  1/10th of a second

The time is 9 hours 59 minutes 59 seconds 9/10ths of a second.
* In the stopwatch mode, the following three keys, \( \text{start/stop} \), \( \text{lap} \) and \( \text{reset} \), are used.

1. Normal time measurement

**START**  **STOP**  **START**  **STOP**  **START**  **STOP**

Example: Timing a 100-meter race

\( 0 \)  \( a \)  \( b \)  \( c \)

Start  \( \rightarrow \)  Goal  Check (recording of time)

**KEY OPERATION**

\( \text{Reset} \)  \( \text{Start} \)  \( \text{Stop} \)  \( 0-00 \: 13.8 \)  \( \text{Reset} \)

2. Net time measurement (Excluding loss time)

**START**  **STOP**  **START**  **STOP**  **START**  **STOP**

Example: Soccer game

\( 0 \)  \( a \)  \( b \)  \( a+b \)  \( c \)

**KEY OPERATION**

(Reset)  \( \text{Start} \)  \( \text{Stop} \)  \( 0-45 \: 00.0 \)  \( \text{AS} \)

(Reset)  \( \text{Start} \)  \( \text{Stop} \)  \( \text{Stop} \)  \( \text{Stop} \)

3. Lap time measurement

**START**  **STOP(a)**  **STOP(b)**  **STOP(c)**

Example: Measuring lap times of a 1500-meter swimming race

\( 0 \)  \( a \)  \( b \)  \( c \)

**KEY OPERATION**

(Reset)  \( \text{Start} \)  \( \text{100m lap} \)  \( \text{Unlock} \)  \( \text{Stop} \)

(Reset)  \( \text{Start} \)  \( \text{Unlock} \)  \( \text{Stop} \)  \( \text{Stop} \)

Check (recording of time)

\( 0-16 \: 58.9 \)  \( \text{AS} \)

(16 min. 58.9 sec.)  \( \text{Reset} \)
It is advisable to replace the battery with a new one before timing an event continuously for a prolonged period. This will prevent the failure of the stopwatch function due to a battery voltage drop.

**CALCULATOR**
- Set the mode selector to COMP.
- By operating the keys, time and date calculations are possible in addition to the basic four functions and constant calculations. As the calendar is programmed from 1901 to 2099 inclusive, any day of the week can be found instantly and the number of days for a certain period of time can be calculated.

Calculations are possible up to 8 digits and in the algebraic logic sequence.

- **Overflow check**
  If an error (e.g., a ÷ 0 =, time calculation of more than 99 hours, or date calculations beyond the programmed calendar range) occurs in calculations, or if an answer exceeds an 8-digit integer, an "E" sign appears in the first column, making further calculation impossible.
  The overflow check can be released by depressing the **AC** key.

**EXAMPLE**

<table>
<thead>
<tr>
<th>EXAMPLE</th>
<th>OPERATION</th>
<th>READ-OUT</th>
</tr>
</thead>
<tbody>
<tr>
<td>(12+3-45.6)×89÷7</td>
<td>1 2 3 4 5 6 8 9 7</td>
<td>-389.0571</td>
</tr>
<tr>
<td></td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

**OPERATION**

- 23×33=75.9
- 116×33=382.8
- 963÷12=80.25
- 2580÷12=215

**READ-OUT**

<p>| | |</p>
<table>
<thead>
<tr>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>75.9</td>
</tr>
<tr>
<td></td>
<td>382.8</td>
</tr>
<tr>
<td></td>
<td>80.25</td>
</tr>
<tr>
<td></td>
<td>215</td>
</tr>
</tbody>
</table>

*For the other two basic functions, the first entry is set as a constant in the same way as in the above operation.*

**Time calculations** (Entry of 0 is necessary for 0)

- 1 hr. 25 min.
- 2 hr. 54 sec.
- 3 hr. 25 min. 54 sec.
- 2 hr. 18 min. × 3 = 6 hr. 54 min.

<p>| | |</p>
<table>
<thead>
<tr>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>1-2500</td>
</tr>
<tr>
<td></td>
<td>3-2554</td>
</tr>
<tr>
<td></td>
<td>2-1800</td>
</tr>
<tr>
<td></td>
<td>6-5400</td>
</tr>
</tbody>
</table>

* No calculation can be done without re-entering the time displayed in the clock or stopwatch.*
EXAMPLE

OPERATION

READ-OUT

Date calculations (1901 to 2099 inclusive)  Set MODE selector to COMP.
With days of the 21 century, enter all four digits of the year.

What will the day of the week be on Dec. 24, 1977?

77[12][24][77] 7.7.--1.2.--2.4
(Saturday) ←

What will the day of the week be on Dec. 31, 2001?

2001[12][31][77] 0.1.12.31
(−) (Monday)

How many days are there from Jul. 1, to Oct. 31, 1977?

77[10][31][77] 7.7.--10.--31
77[7][1][77] 7.7.--10.--32

What date and day of the week with the 100th day from Jul. 15, 1977 be?

77[7][15][77] 7.7.--0.7.--15
100[7] 7.7.--10.--23
(−) (Sunday)

Constant calculations are possible for time and date calculations.
To clear a wrong entry in calculations, depress the [C] key, and make the right entry so you can continue further calculation. To correct a wrong entry in date or time calculations, depress the [C] key and all the entry of date or time factors can be cleared. Then restart with the year or hours.

APPLICATIONS  From Idea to Planned Use

1. To make effective use of the alarm with 4 settings

1) Set the alarm in four time positions at intervals of 2 or 3 minutes so you can use it as an alarm clock.
2) Set it at the time to leave for school, office and shopping, in that time sequence, so all your family will be on time.
3) Set it at the time to stop playing cards, start home work and go to bed, so you can instill good discipline in your children.
4) Set it at the time to give milk to your baby, take medicine and do other important thing so you won't need to watch the clock all the time.
5) Set it at the time for an appointment, important telephone call, meeting, etc. during office hours, so you are sure to be punctual for your appointment and in doing your office work.

2. What can you do with the calculator?

1) Checking of answers to arithmetical and mathematic problems, and calculations on household accounts and food calories.
2) Orienteering, rallies, and other events.
3) Calculations of bank interest using date calculation function.

3. Try using the stopwatch for sports or something else

1) Record your time in a race or in other sports.
2) Measure CM time length.
3) Measure the time required to solve mathematical problems.

7 IF ANY SIGN OF MALFUNCTION IS NOTICED

Should any sign of malfunction be noticed, consult the table below before taking the unit to a nearby dealer. If not remedied, the unit should be taken to the dealer for service.

<table>
<thead>
<tr>
<th>TROUBLE</th>
<th>POSSIBLE CAUSE</th>
</tr>
</thead>
<tbody>
<tr>
<td>NO DISPLAY APPEARS.</td>
<td>● Check battery connections.</td>

SPECIFICATIONS

CLOCK

Crystal oscillator frequency 32,768 Hz
Accuracy Within ±15 sec. per month (Normal temp.)
Read-out Digital display of date, day, hours, minutes, and AM/PM
Calendar Days, longer and shorter months, and leap years from 1901 to 2099 inclusive are programmed.
Alarm 4 alarm time settings
4 different tones (electronic buzzer). Minimum of 1 minute intervals between alarm setting.
Time setting Direct setting by key operation

STOPWATCH

Measuring capacity 9 hours 59 minutes 59 seconds 9/10ths of a second
Measuring unit 1/10th of a second
Measuring modes Normal, net time and lap time
Read-out Digital display of hours, minutes, seconds and fractions of second
**CALCULATOR**

**Functions**
Basic functions, constant calculations, time calculations, date calculations and mixed calculations

**Capacity**
Four basic functions .......... 8 digits
Time calculations .................. Up to 99 hours
Date calculations .......... January 1, 1901 ~ December 31, 1999

**Read-out**
Entry and answer with unnecessary zeroes suppressed

**Decimal point**
Full-floating decimal system with underflow

**Overflow check**
Indicated by the "E" sign in first column, locking the calculator

**COMMON SECTION**

**Main components**
One chip LSI, C-MOS-LSI, crystal oscillator (fork type)

**Display tube**
8-digit Digitron tube

**Power source**
AC and DC
AC: 100, 117, 220 or 240V (±10V), 50/60Hz, with applicable AC Adaptor.
DC: Clock — 2 silver oxide batteries (G-13)
Display — 1 AA-size dry battery (UM-3, SUM-3, or AM-3)

**Battery life:**
Clock — G-13: one year or more

Display — SUM-3: about 5 hours in case of continuous use

**Usable temperature**
0°C ~ 40°C (32°F ~ 104°F)

**Power consumption**
0.85 W

**Dimensions**
37 (h) x 146 (w) x 71 (d) mm
(1-3/8" H x 5-5/8" W x 3" D)

**Weight**
174 g (6 oz) including batteries
