Operations Guide

Made in America, with pride, by National Semiconductor

All the advanced electronics in this Novus calculator are manufactured by National Semiconductor Corporation, a world leader in the design and production solid-state electronic components. National is a multinational, NYSE-listed company that's demonstrated unparalleled growth over the last six years.

Your Novus calculator is built in the USA. That's because American technology --- and specifically the know-how of National Semiconductor-is the key to this product's quality, reliability and computation "horsepower." No other manufacturer can equal National's ability to produce rugged, performancepacked components in the large volumes that result in quality products with small price tags.

The same National Semiconductor electronics have helped take Americans to the moon and back, and are the critical "guts" of high-performance products ranging from life-saving medical equipment to consumer products such as color ty's and digital watches.

You now own one of the world's most technicallyadvanced consumer products. We hope you'll be as proud to use it as we were to make it.

Getting Started

Turn your Novus Scientist on with the switch on the left side of the calculator. The calculator is automatically cleared and the display should now show 0. If it does not, check to see if the battery needs recharging by connecting the Novus AC charger.

AC Charger

Your Novus Scientist is powered by rechargeable batteries. The Scientist will show a decimal point on the extreme left side of the display as a low-battery indicator. Although calculations can still be made white the low-battery indicator is on, the battery should be charged as soon as possible. Continued use on a weak battery may result in inaccurate answers. To charge the batteries connect the Novus AC Charger to the jack on the top left side of the machine. A typical full charge takes five hours. You can operate your calculator while the charger is connected. BE SURE THE CALCULATOR IS TURNED OFF BEFORE CONNECTING THE AC CHARGER.

Display

The Novus Scient and a 2-digit expo display any positi x 10⁻⁹⁹ and 9,9999 9.9999999 x 1099 by the display of the two least significant digits of the 3-digit exponent. Computed results between the range of 0.1 and 99999999 are displayed in floating point format. Results smaller than 0.1 or larger than 99999999 are automatically converted to scientific notation format.

Automatic Display Shutoff

To save battery life, the Novus Scientist shuts off all but the most significant digit of the mantissa if no key has been pressed for approximately 30 seconds. No data has changed and to restore the display without changing its contents, touch CHS twice. ...

Reverse Polish Logic and the Stack Principle

The Novus Scientist uses Reverse Polish logic with four registers called X, Y, Z and T. A register is an electronic element used to store data while it is being displayed, processed or waiting to be processed. The four registers are arranged in a "stack" as follows: (To avoid confusion between the name of a register) and its contents, the registers in this diagram and the diagrams in Appendix A are represented by capital letters X, Y, Z and T and the contents of the registers. by lower case letters x, y, z and t).

The second of th			11 4

ntents (x) of register X. See Appendix A for diagrams showing what happens to the stack for each operation . of the Novus Scientist.

Keying In and Entering Numbers

To enter the first number in a 2-function calculation, key in the number and touch ENT. If your number Includes a decimal point, key it in with the number. If a decimal is keyed in more than once in a number entry, the calculator will use the last decimal keyed in. You do not have to key in the decimal in whole numbers.

To enter a negative number, key in the number and touch CHS.

Scientific Notation

Any number can be entered into the Novus Scientist in scientific notation—that is, as a number (mantissa). multiplied by 10 raised to a power (exponent). The exponent indicates how many places the decimal

point should be moved. If the exponent is positive, the decimal is moved to the right. If the exponent is negative, the decimal is moved to the left. For example: 1200 can be entered as 1.2 x 103. Key in: 1.2 **EE 3**, the display shows: 1.2 03. Note: The last two digits on the right side of the display are used to indicate exponents.

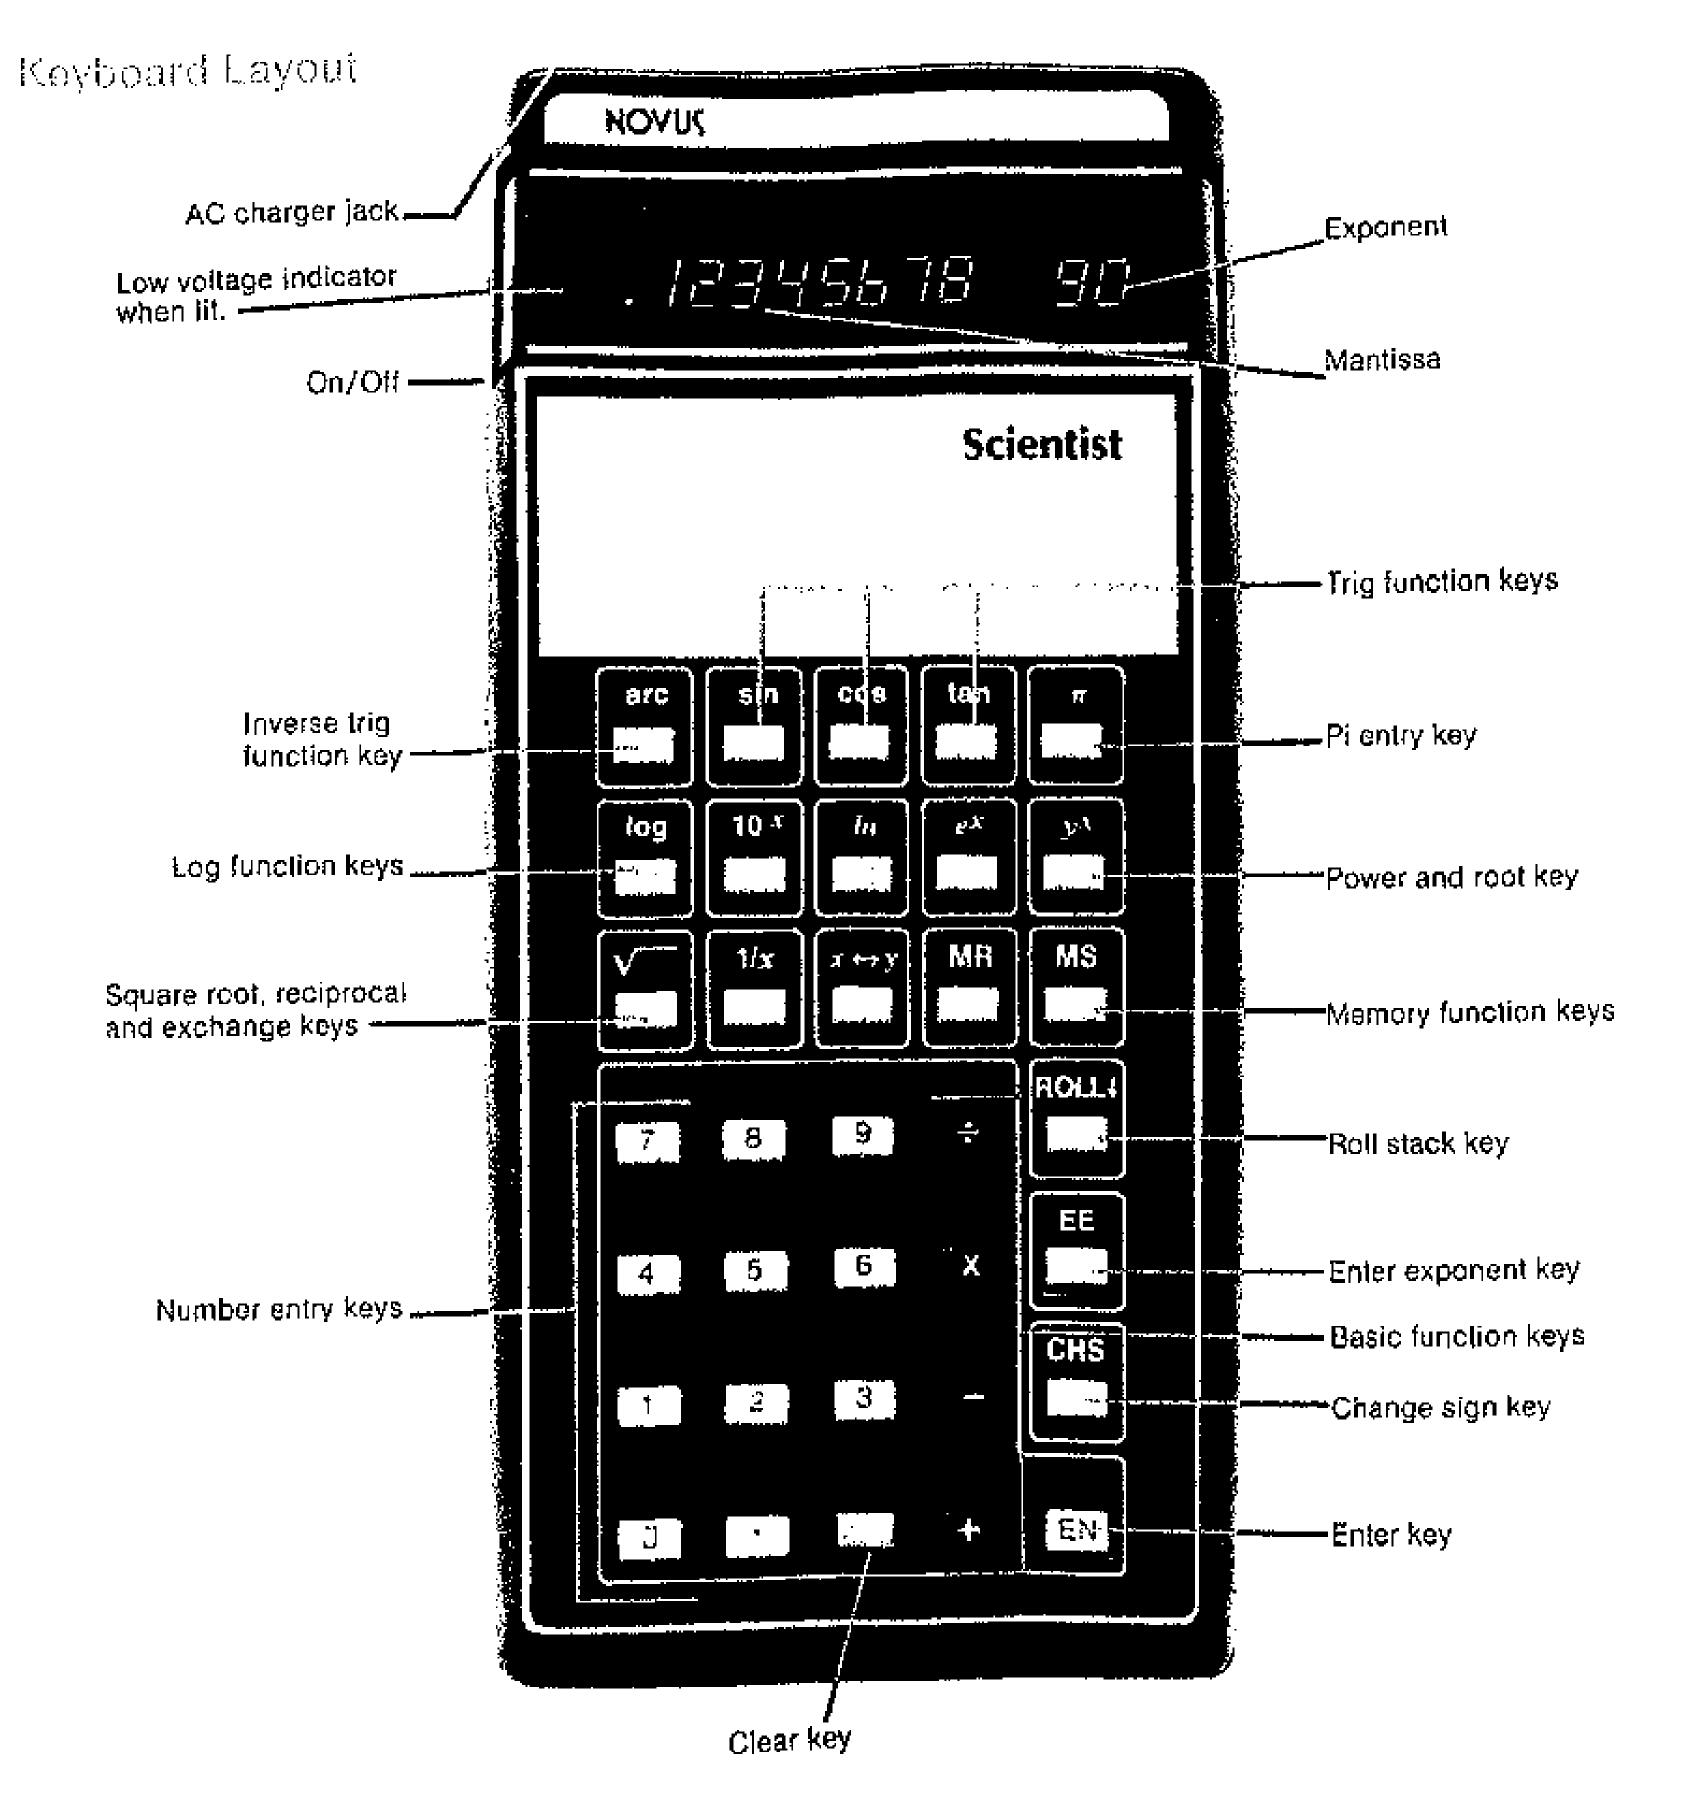

Very large and very small numbers must be entered. scientific notation. For example: 134,000,000,000,000 (written 1.34 x 1014) must be keyed in: 1.34 EE 14; display shows: 1.34 14. To enter a negative exponent, touch CHS after keying in the exponent. Example: .000000000034 (written 3.4 x 10⁻¹¹) must b keyed in: 3.4 EE 11 CHS, display shows: 3.4 -11. If EE has not been preceded by a mantissa entry the EE depression is ignored.

Correcting Mistakes

To clear a wrong number entry, touch C. Touching C clears the X register (display) and drops the stack down.

To correct a wrong exponent entry, just key in the correct exponent. If more than two numbers are keys in after touching .EE., the calculator retains the last two numbers keyed in as the exponent.

To correct a wrong mantissa entry after EE has bee touched, touch . (decimal). This will clear the displato 0 and allow re-entry of the mantissa and exponent

Keyboard Callouts

Note: Any reference to 'x' is to the number NOW in the display. Any reference to 'y' is to the number LAST in the display.

•				
	arc	Touched before sin, cos or tan computes the inverse sine, cosine or tangent (in degrees).	1/x	Computes the reciprocal of the number in the display. (Divides 1 by 'x').
+	sin	respectively, of the number in the display. Computes the sine of the angle (in degrees)	х⇔у	Exchanges the number now in the display with the number last in the display.
	cos	in the display. Computes the cosine of the angle (in degrees)	MP	Recalls the contents of memory to the display (X register), and raises stack.
		in the display.	MS	Stores the number in the display in memory.
	tan	Computes the tangent of the angle (in degrees) in the display.	ROLL	Moves the contents of register X to register I the contents of register Y to register X, the contents of register Z to register Y and the
	77	Enters Pi $(\pi)=3.1415927$ into the display (X register), and raises stack.	!' <u></u>	contents of register T to register Z.

į	Y ^K	Raises 'y' to the 'x' power.	+	Adds 'x' to 'y'.
	V	Computes the square root of the number in the display.	C	Clears contents of display (x register) and rolls stack down.

Performing Calculations

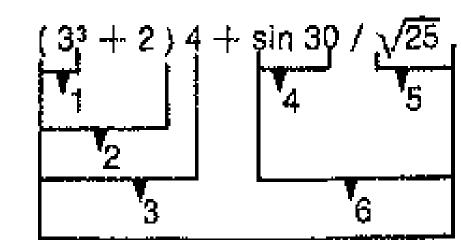

In addition to the separate memory, there are four locations where numbers can be kept for operations. These locations are called registers and in the Scientist these have been combined into an automatic stack. The Novus Scientist uses the four-level stack along with Reverse Polish logic to allow calculations according to mathematical hierarchy.

Mathematical Hierarchy and Reverse Polish Logic

Hierarchy is a term for the rules of mathematics referring to the order of performance of operations on numbers. Those rules are:

- Do the problem left to right.
- Do all operations within parentheses, if any, first.
- 3. Perform operations in the following order:
- a. raising to powers, taking roots, trig, log and reciprocal functions,
- b. multiplication and division,
- c. addition and subtraction.
- Repeat steps 1 through 3 until the calculation is complete.

Example: The equation $(3^3 + 2)4 + \sin 30/\sqrt{25} = 116.1$ is solved according to the rules of hierarchy as follows:

- 1. 33 == 27.
- 2. 2 + 27 = 29.
- 3. $29 \times 4 = 116$.
- 4. sin 30 == .5
- 5. $\sqrt{25} = 5$.
- 6. $.5 \div 5 = .1$
- 7. 116 + .1 = 116.1

If you remember the following three steps in applying Reverse Polish logic to the rules of hierarchy, you will quickly master your Scientist and have confidence in its answers.

- Starting at the left and working right, key in the next number (or the first if this is the beginning of a new problem).
- 2. Ask yourself: "Can an operation be performed according to the rules of hierarchy?" If so, perform all operations possible. If not, touch ENT.
- 3. Repeat steps 1 and 2 until your calculation is complete.

Following these three steps, you can calculate the example equation $(3^3 \pm 2)4 + \sin 30 / \sqrt{25}$ using Reverse Polish logic as follows:

KEY IN	DISPLAY SHOWS	COMMENTS
3	3	
ENT	3.	
3	3	
	26.999981*	3³.
2	2	
	28.999981	$(3^3 + 2)$
4	4	
	115.99992	$(3^3 + 2)4$
30	30	
S C	0.5000002	sin 30
25	25	
	5.	$\sqrt{25}$.
	0.1	.5 ÷ 5
	116.09992	$(3^3 + 2)4 + \sin 30 / \sqrt{25}$

Calculation is complete and performed according to the rules of hierarchy.

*See note page 7,

One-Factor Calculations

One-factor functions work directly on the number in the display. There is no need to touch ENT before performing the function.

•

Square Root and Reciprocal Functions

- Computes the square root of the number in the display.
- Computes the reciprocal of the number in the display.

 Example: Key in: 2 1/x; display shows: 0.5.

Logarithmic Functions

- Computes the natural logarithm of any positive number in the display.
- Computes the natural antilog of the number in the display by raising 'e' (2.7182812) to the power in the display.
- log Computes the common logarithm of any positive number in the display.
- Computes the common antilog of the number in the display by raising 10 to the power in the display.

Trigonometric Functions

- Sin Computes the sine of the angle (in degrees) in the display.
- cos Computes the cosine of the angle (in degrees) in the display.
- computes the tangent of the angle (in degrees) in the display.
- Touched before sin, cos, or tan, computes the arcisine, arc cosine or arc tangent (in degrees), respectively, of the number in the display.

Example: Key in: 30 sin; display shows: 0.5000002 Key in: .5 arc cos; display shows: 60.000454

Two-Factor Calculations

To perform two-factor calculations, key in the first factor, touch ENT, key in the second factor and touch the desired function key.

- + Adds 'x' to 'y'.
- Subtracts 'x' from 'y'.

Example: Key in: 2 ENT 3 + display shows: 5

- X Multiplies 'y' by 'x'.
- Divides 'y' by 'x'.

Example: Key in: 12.36 ENT 6 🚉; display shows: 2.06.

Power and Root Functions

y" Raises 'y' to the 'x' power.

Example: Key in: 5 ENT 3 yx; display shows: 124.99984.*

Since taking the xth root of y is the same as raising to the it/x power, to obtain roots, touch it/x; before touching 'y*.

Example: Key in: 125 ENT 3 1/x yx; display shows: 5.0000001.*

Mote: The actual results which occur when performing special functions must be rounded off to the third to sixth decimal place for greater accuracy.

The inaccuracy (e.g., 3) = 26.99981 mater of 27) of answers occurs because extraguard digits and rounding techniques are not employed during calculations in order to simplify the technical design of your calculator.

Chain Calculations

The number in the display is always ready to have calculations performed on it.

Example: $(2 + 3) \times (4 + 5) = 45$.

KEY IN	DISPLAY SHOWS
2	2
ENT	2.
3	3
	5.
4	4
ENT	4.
5	5
-	9.
×	45.

Memory

MS	Stores the number in the display in memory
	(register M).

MR Recalls the contents of memory (register M) to the display (register X).

To clear memory, key in: 0 MS.

Error Conditions

In the event of a logic error (e.g., division by zero) the Novus Scientist will display all zeros and decimal points. An error condition is reset by touching [C. All registers are cleared to zero. Memory is not affected by error conditions. See Appendix C, Table 1, for a complete table of improper operations.

Appendix A.--Stack Diagrams

The following diagrams show what happens to the stack for each operation on the Novus Scientist.
Contents of registers are indicated by lower case letters x, y, z and t, Locations are indicated by capital letters X, Y, Z and T. The display always shows the contents of register X. Memory is register M.

Appendix B -- Part i Some Examples

In the previous sections of this manual is a summary of how the functions of the Novus Scientist work.
This appendix demonstrates the versatility of the Scientist in a variety of disciplines.

MATHEMATICS

Real roots of a quadratic equation. Given the equation $2x^2 + 3x - 4$, find the roots: x_1 and x_2 .

Roots x₁ and x₂ can be found from the equation:

$$x = \frac{-b \pm \sqrt{b^2 - 4ac}}{2a}$$

$$\frac{-b \pm \sqrt{b^2 - 4ac}}{2a}$$

$$\frac{-b \pm \sqrt{b^2 - 4ac}}{2a}$$

where: a = 2, b = 3 and c = -4.

PHYMOS

What gravitational force does the earth exert on the moon? From Newton's law of universal gravitation,

$$F = G \frac{m_1 m_2}{r^2}$$

where: $m_1 = mass$ of the earth = 5.98×10^{24} kg $m_2 = mass$ of the moon = 7.36×10^{22} kg.

r = distance from the earth to the moon = 3.84×10^8 m

G = Universal gravitational constant = 6.67 × 10⁻¹¹ N-m²/ kg²

therefore:

$$F = 6.67 \times 10^{-11} \times \frac{5.98 \times 10^{24} \times 7.36 \times 10^{22}}{(3.84 \times 10^{8})^{2}}$$

 $= 1.99 \times 10^{20}$ newtons. COMMENTS DISPLAY SHOWS 6.67 6.67 EE 6.67 11 6,67 —11 Universal gravitational CHS 6.67 constant. ENT 6.67 -11 5.98 5.98 EE 5.98 24 Mass of the earth. 5.98 24 ENT 5.98 7.36 7.36 7.36 22 Mass of the moon. 7.36 22 X 4.40128

What is the velocity of a proton (mass $= 1.67 \times 10^{-27}$ kg) which is accelerated through a potential difference of 300 volts?

Since the charge on a proton is ----e, its kinetic energy is 300eV (electron-volts) x 1.6 x 10⁻¹⁹ joules/eV == 4.8×10^{-17} joules.

Using the equation KE = ½ mv², where KE = kinetic energy of the electron, m = mass of the proton = 1.67×10^{-27} and v = velocity of the electron.

$$V = \sqrt{\frac{2KE}{m}} = \sqrt{\frac{2 \times 4.8 \times 10^{-17}}{1.67 \times 10^{-27}}}$$

== 2.397 x 105 meters/sec.

One of the predictions of Einstein's theory of relativing is that the mass of moving body is greater than its mass at rest. Using the equation:

$$M = \frac{M_0}{\sqrt{1 - v^2/c^2}}$$

Where: M == mass of the moving body,

 M_{\odot} = mass of the body at rest,

v == velocity of the body,

c = speed of light (2.997 x 108 m/sec).

Find the mass of an electron traveling at 75% of the speed of light. If the rest mass of an electron is 9.105 \times 10⁻³¹ kg. If v = .75c, then the equation becomes;

$$M = \frac{M_0}{\sqrt{1 - (.75c)^2/c^2}} = \frac{M_0}{\sqrt{1 - (.75)^2}}$$

Substituting:

Substituting:
$$M = \frac{9.109 \times 10^{-33}}{\sqrt{1 - (.75)^2}}$$

Determine the rise of the mercury column in a glass tube of Inside diameter 0.6 mm which stands vertically with one end immersed in mercury. The angle of contact with the mercury is 57.3° and the surface tension is 490 dynes/cm.

Using the formula: h = 2T/rdg (cos θ)

where: h = height of mercury in tube,

T = surface tension,

r = inside radius of tube (½ diameter),

d = density of the liquid == 13.6 g/cm³ for mercury.

g = acceleration due to gravity

 $= 980 \text{ cm/sec}^2$.

 $h = \frac{2 \times 490 \text{ dynes/cm}}{0.03 \text{ cm} \times 13.6 \text{ g/cm}^3 \times 980 \text{ cm/sec}^2} \times \cos 57.3^\circ$ = 1.324119

Appendix 3 -- Part 2 Hyperbolic and Inverse Hyperbolic Functions.

The hyperbolic and inverse hyperbolic functions can be found by using the Gudermannian function:

gd x = 2 arc tan e*
$$-\pi/2$$
 (Note: $\pi/2 = 90^{\circ}$).

·

and the inverse Gudermannian function:

$$gd^{-1} x = ln tan [\pi/4 + x/2] (Note: \pi/4 = 45 °).$$

in conjunction with the following formulas:

$$\sinh x = \frac{e^{x} - e^{-x}}{2},$$

$$\sinh^{-1} x = \ln \{x + \sqrt{(x^{2} + 1)}\} = gd^{-1} \{\sin^{-1} x\},$$

$$\cosh x = \frac{e^{x} - e^{-x}}{2},$$

$$\tanh x = \frac{\sinh x}{\sinh x} = \sin g d x,$$

$$tanh^{-1} x = \frac{1}{2} ln [1 + x/1 - x] = gd^{-1} (sin^{-1} x),$$

 $\cosh^{-1}x = \operatorname{sech}^{-1}1/x$

$$coth^{-1}x = tanh^{-1} 1/x$$

sech⁻¹ x =
$$[\ln 1/x + \sqrt{1/x^2 - 1}] = gd^{-1} (\cos^{-1} x),$$

$$csch^{-1}x = sinh^{-1} 1/x$$

Inverse hyperbolic secant: sech-1.52 - 1.2713823 Key in: .52 arc cos 2 → 45 + tan In Display shows: 1.2713823

Inverse hyperbolic cosine: $\cosh^{-1} 30 = 4.0941957$ Key in: 30 1/x arc cos 2 + 45 + tan in Display shows: 4.0941957

Inverse hyperbolic cotangent; $\coth^{-1} 30 = 3.334028 - 0\lambda$ Key in: 30 1/x arc sin 2 + 45 + tanin Display shows: 3.334028 -02

Inverse hyperbolic cosecant: $csch^{-1}.52 = 1.4086939$ Key in: .52 1/x ard tan 2 + 45 + tan in Display shows: 1.4086939

Appendix B -- Part 3 Some Common Mathematical Formulae with Examples

Rectangle, area and perimeter

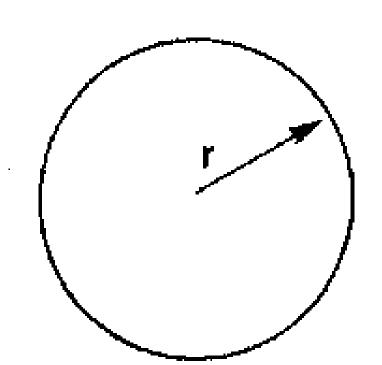

Rectangle of width X and length Y Area ∞ XY

Perimeter = 2X + 2Y

Example: Rectangle of width 4 and length 8:

Area: Key in: 4 ENT 8 X Display shows: 32.

Perimeter: Key in: 2 ENT 4 × 2 ENT 8 × + Display shows: 24.

Circle, area and circumference Circle of radius r.

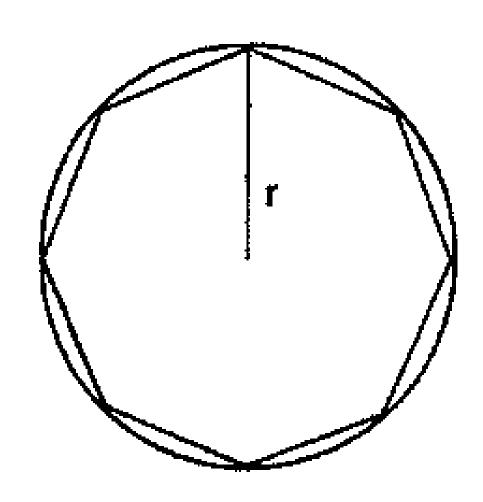

Area ≖ πr²

Circumference = $2\pi r$

Example: Circle of radius 5.

Area: Key in: π ENT 5 ENT imes imesDisplay shows: 78.539817

Circumference: Key in: 2 ENT 7 X 5 X Display shows: 31.415927

Regular polygon circumscribed in a circle, area and perimeter

Regular polygon with a sides circumscribed in a circle of radius r.

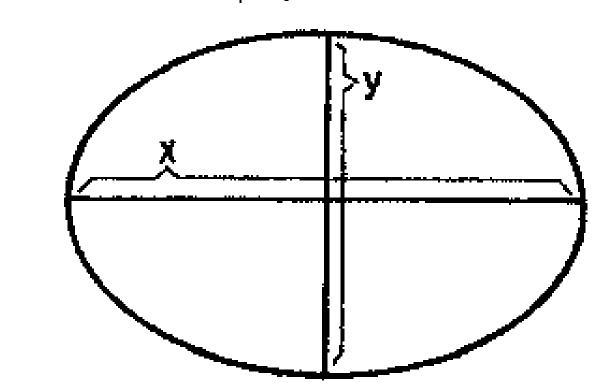

Area $= \frac{1}{2} nr^2 \sin \frac{360}{n}$

Perimeter = 2nr sin 180/n

Example: Polygon with 8 sides inscribed in a circle of radius 5.

Area: Key in: 1 ENT 2 + 8 X 5 ENT imes imes 360 ENT 8 \div sin imesDisplay shows: 70.71064

Perimeter: Key in: 2 ENT 8 X 5 X 180 ENT 8 + sin X Display shows: 30.614688

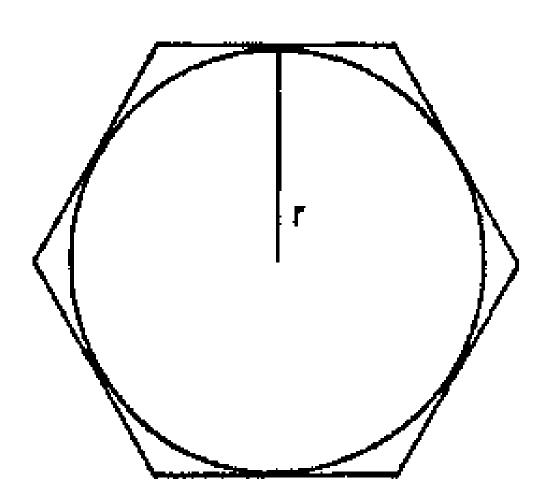

Ellipse, area and circumference Ellipse of major axis X and minor axis Y.

Area == 1/4 πXY Circumference == $2\pi\sqrt{1/8(X^2+Y^2)}$ Example: Ellipse of major axis 8 and minor axis 4. Area: Key in: 1 ENT 4 上海 X 8 X 4 X

Display shows: 25.132739

Circumference: Key in: 1 ENT 8 注 8 ENT X 4 ENT | X | V | 2 | X | W | X | Display shows: 19.869172

Regular polygon circumscribing a circle, area and perimeter

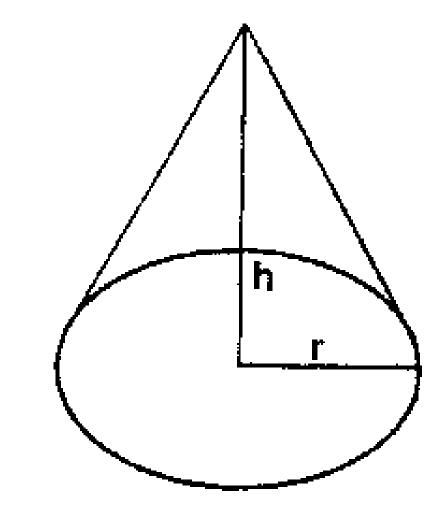

Regular polygon with n sides circumscribing a circle of radius 5.

Area ≔ nr² tan 180/n Perimeter ≠ 2nr tan 180/n

Example: Polygon with 8 sides circumscribing a circle of radius 5.

Area: Key in: 8 ENT 5 ENT X X 180 ENT 8 Sin X Display shows: 76.53672

Perimeter: Key in: 2 ENT 8 X 5 X 180
ENT 8 + tan X
Display shows: 33.137096

Cone, area and volume Cone of radius r and height h

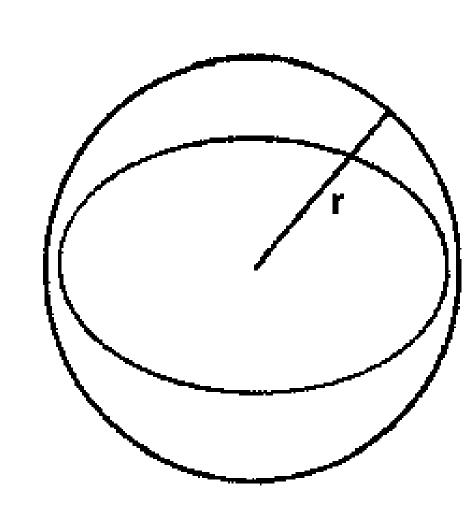

Volume == ½πr²h

Area — $\pi r \sqrt{r^2 + h^2}$

Example: Cone of radius 5

and height 10.

Display shows: 261.79935

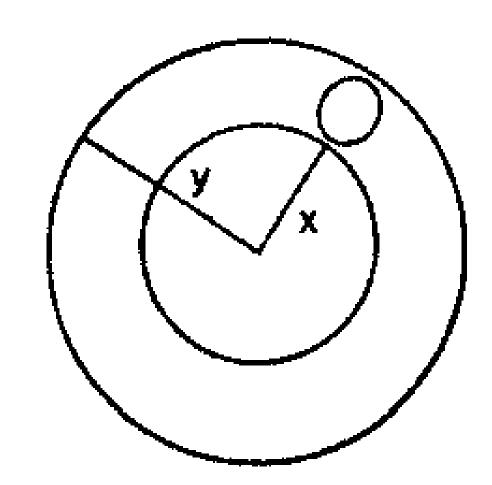

Sphere, area and volume Sphere of radius r. Volume = $4/3\pi r^3$

Area $= 4\pi r^2$

Example: Sphere of radius 5.

Volume: Key in: 5 ENT 3 y^{κ} π \times 4 ENT 3 \div \times Display shows: 523.59809

Area: Key in: 4 ENT π ; × 5 ENT × × Display shows: 314.15925

Torus, area and volume Torus of inner radius x and outer radius y.

Volume = $\frac{1}{4}\pi^2$ (x+y) (y-x)²

Area $\Rightarrow \pi^2(y^2-x^2)$

Example: Torus with inner radius 2 and outer radius 4.

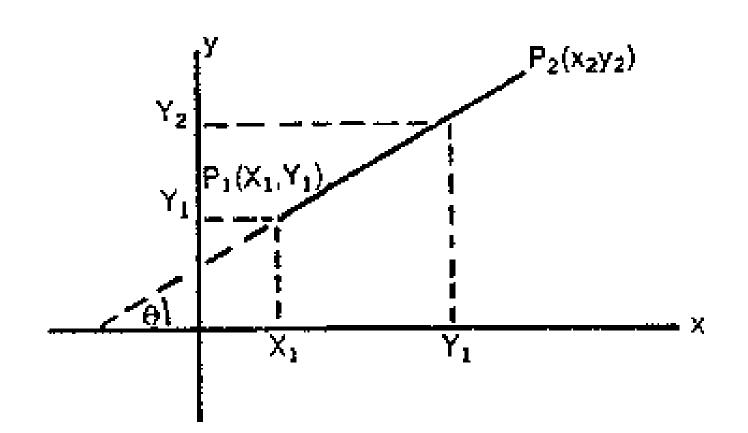

Volume: Key in: 1 ENT 4 + # ENT X X 2
ENT 4 + 4 ENT 2 - ENT X
X X
Display shows: 59.217626

Display shows: 59.217626

Area Key in: # ENT X 4 ENT X 2

ENT X - X

Display shows: 118.43525

Distance between two points, P_1 and P_2 Distance d between two points $P_1(x_1y_1)$ and $P_2(x_2y_2)$. $d = \sqrt{(x_2-x_1)^2 + (y_2-y_1)^2}$

Example: Distance between points $P_1(3.4)$ and $P_2(5.8)$. Key in: 5 ENT 3 — ENT \times 8 ENT 4 — ENT \times -I- $\sqrt{}$ Display shows: 4.472135

Slope and angle of line between points

Slope and angle of line between points P₁ and P₂.

Slope = m - y₂--y₁/x₂--x₁ = tan O

Example: Slope: Key in: 8 ENT 4 - 5

ENT 3 - +

Display shows: 2.

Angle: Key in: arc, tan

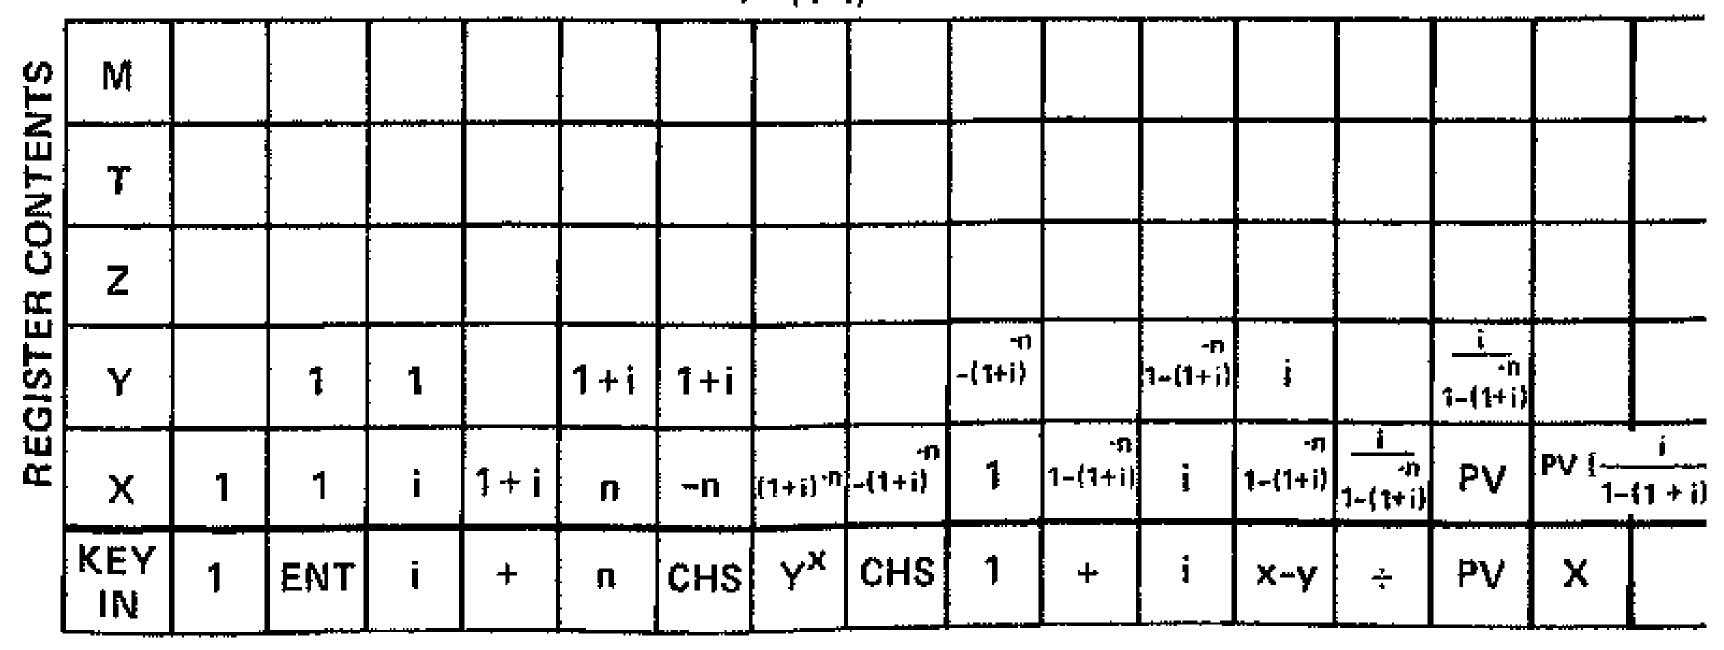

Display shows: 63.434781°

Appendix C — Tables

Table 1: Conditions for Error Indication

FUNCTION	CONDITION (x = contents of register X)
÷ or 1/x	x = 0
У [≭]	y < 0 x log y > 99
e×	x' > 99
10 ^x	x > 99
log x or ln x	x ≤ 0
sin x, cos x, tan x	x < 0 or x > 90
arc sin x or arc cos x	x < 0 or x > 1
arc tan x	x < 0

Table 2: Range of Functions

FUNCTION	RANGE
=, -, ×, +, 1/x	±1 x 10 ⁻⁹⁹ ≤ x ≤ ±9.9999999 x 10 ⁹⁹
√×	±1 x 10-99 ≤ x ≤ ±9.9999999 x 1099
log x	0 < x ≤ +9.9999999 x 1¢
ln x	0 < x ≤ ÷9.9999999 x 1¢
10×	±1 x 10-99 ≤ x ≤ +99
e×	±1 x 10-99 ≤ x ≤ ÷99
у	y > 0
sin, cos, tan	0° ≤ x < ÷90°
arc sin, arc cos	0 ≤ x ≤ +1
arc tan	0 ≤ x ≤ 9.9999999 x 1091

Other Products

Other "professional" calculators from NOVUS...

Novus 4510 Mathematician

The Electronic Slide Rule

- Trig and inverse trig functions
- Common and natural logs and anti-logs
- Fully addressable, accumulating memory

Novus 4515 Mathematician P.R.

The Programmable Electronic Slide Rule

- Same features as Novus 4510
- 100-step programming capability

Novus 4525 Scientist P.R.

The Scientist's Programmable Electronic Slide Rule

- Same features as Novus 4520
- 100-step programming capability

Novus 6010 International Computer

The Electronic Measurement Converter

- More than 65 international measurement conversions
- Fully addressable, accumulating memory
- Total calculating capability with live percent

Novus 6020 Financier

The Electronic Financial Calculator

- Dedicated to solving financial calculations
- Pre-programmed financial equations
- Fully addressable, accumulating memory

Novus 6025 Financier P.R.

The Programmable Electronic Financial Calculator

- Same features as Novus 6020
- 100-step programming capability

Novus 6030 Statistician

The Electronic Statistical Calculator

- Dedicated to solving statistical calculations
- Pre-programmed statistical equations
- Fully addressable, accumulating memory

Novus 6035 Statistician P.R.

The Programmable Electronic Statistical Calculator

- Same features as Novus 6030
- 100-step programming capability

Novus AC adaptors and chargers also available

Consumer Warranty

Novus Model 4520 NOVUS, the consumer products division of National Semiconductor Corporation, is proud to guarantee your electronic calculator to be free from defects in workmanship and materials for a period of one year from the date of your purchase. Defects caused by abuse, accidents, modifications, negligence, misuse or other causes beyond the control of NOVUS are, of course, not covered by this warranty, nor are batteries. Should the calculator prove defective within 30 days of purchase, NOVUS will repair or, at its discretion, replace it free of charge. If the defect occurs after 30 days from date of purchase, a charge of \$3.50 will be made for handling and insurance. If your calculator becomes defective after the one-year period, NOVUS will make repairs for a nominal charge of \$20,00. Simply mail it prepaid and insured with your check or money order to the nearest NOVUS service center. Repair prices are subject to change without notice. Please do not send or include cash. Make your check or money order payable to NOVUS. Upon receipt, your calculator will be promptly serviced. and returned to you freight prepaid.

Consumer Warra Registration Certific

Please put your warranty into effect by completing this form and mailing it within 10 days from date purchase to the NOVUS service center in your ar
